

# Relativity®

## Text Analytics

Relativity is the easy-to-use review platform that helps users speed up existing workflows, easily search huge volumes of data, and quickly build the facts of a case.

### Go Faster

Through the use of text analytics search technology, Relativity can automatically cluster similar documents together. By organizing discovery documents based on similarity, users can increase doc-to-doc review speed without changing their existing review workflow. Review teams can code documents the same way they always have, while increasing speed and improving accuracy. Clustering similar documents together requires no user input, as Relativity's text analytics search engine does the work.

### Assisted Review

Subject matter experts can also train Relativity on relevance and key issues by coding statistically sampled subsets of documents. Using Relativity's Assisted Review workflow, the text analytics engine codes the remaining documents in the case based on the small subset of examples. Users can prioritize the relevant documents and move past large groups of documents identified as non-responsive by Relativity.

### Work Smarter

Building the facts of a case is not a linear process. It's necessary to be able to move quickly and follow a pattern of thought—a task made increasingly difficult by the huge number of documents in today's average case. Relativity's text analytics search technology provides a number of tools to enable an investigative thought process. Between giving users an overview of the document collection through clustering, helping users find similar documents with a right click, allowing users to build example sets of key issues, and running advanced keyword analysis, Relativity helps move past discovery and tell a client's story.

**“In a short time, we managed to review approximately 175 documents per hour—nearly three times the average review time.”**
